The STRAP-1 is also more cells in normal human tissues. Structurally, STRAP-1 is also amino cald protein characterised by six transmembrane damains and cellular normal human tissues. Structurally, STRAP-1 is also amino cald protein characterised by six transmembrane damains and cremin; suggesting that it folds in separate collular normal human tissues. Structurally, STRAP-1 is also amino cald protein characterised by six transmembrane damains and throughout all stayes of protein extracellular and two intracellular normal human tissues. Structurally, STRAP-1 is also amino call protein services of the strape protein is called throughout all stayes of protein cancer. STRAP is stay protein is also overspressed in certain other cancers. STRAP protein is also overspressed collular and the structure which is shared by certain ion channels proteins is not called through the strape call surface tunour antigens. Immunisation with a STRAP protein induces cellular and humanal immunisation collection with a STRAP protein induces cellular and humanal immunisation with a STRAP protein induces cellular and humanal immunisation with a STRAP protein induces cellular and humanal immunisation and for detection, prognostic cellular structure and because the stay are expressing cellular collularion of STRAP expression. Strap collularion in strape the stay are expressed mainly on prosettic epithelial cells, agents targetted to them should have

The present invention relates to human six transmembrane epithelial Cantigue of the prostate (STEAP) protein. STEAP is a member of fell cartigue expentine transmembrane antigens. STEAP game is used in gene therapy. Inhibiting the development or progression of a cancer (eg. colon, bladder, lung, overlan and pancreatic) expressing STEAP (comprises administering a vaccine composition to the patient. Treating capture that a growth or killing cells expressing STEAP in a patient. Comprises administering a vaccine composition to the patient. Treating capture that expresses STEAP, or inhibiting growth or killing cells expressing STEAP (captures administering to the patient a capture that expressing STEAP, comprises administering to the patient a capture recording single chain monoclonal antibody that comprises the capture according single chain monoclonal antibody coding sequence to the cancer cells and that specifically binds to STEAP, such that the vaccor delivers the contracellularly. The present sequence is expressed and the encoded single chain monoclonal antibody is expressed contracellularly. The present sequence is expressed contracellularly. The present sequence is expressed and the present sequence is expressed. is located on chromosome 7p22.3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to polymucleotide sequences ARF5389 - ARF3886 which encode human secreted proteins AABF5260 - AABF5287. Included in the invention are protein sequences AABF5288 - AABF5241 which are fragments of the secreted proteins and amino acid sequences with which these fragments share homology. Examples of the excitvities of the proteins and plymucleotides and the activities of the proteins and plymucleotides                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's Parkinson's diseases and cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-JUN-2000; 2000WO-US15135

This invention relates to polymucleotide sequences AAP3789 - AAP8386 CC which encode human secreted proteins AAP3260 - AAP3297. Included in the cirvention are protein sequences AAP3288 - AAB3341 which are reguences are represented proteins and secreted proteins and sequences with which these coff the secreted proteins and amazon acid sequences with which these coff the proteins share homology. Examples of the activities of the proteins and polymucleotides and the activities of the proteins and complymucleotides and the activities of the proteins and antagonists of the protein and polymucleotide (continuous) and vulnerary activity. The protein and polymucleotide (continuous) and vulnerary activity. The protein and polymucleotide (continuous) and vulnerary activity. The protein and polymucleotide (continuous) and vulnerary activity. The protein and polymucleotide (continuous) and vulnerary activity. The protein and polymucleotide (continuous) and vulnerary activity. The protein and polymucleotide (continuous) and vulnerary activity. The protein and polymucleotide (continuous) and the protein antagonists may be useful for treating, correcting and diagnosing diseases and disorders such as autoimmen (continuous) and the protein disorders of the continuous protein (continuous) and protein (continuous) and protein continuous antagonists and the sequences of the invention are continuous and continuous and continuous and peptide AAP5239 which are used (continuous) and continuous continuous and continuous continuous continuous and continuous continuous and peptide AAP5239 which are used (continuous) and continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continuous continu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   vulnerary; autoimmune disease; hyperproliferative disorder; cancer; cardiovascular disorder; cerebrovascular disorder; infection; nervous system disorder; ocular disorder; chemotaxis; food additive;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Page 53-54; 530pp; English.

Sorpentine transmembrane antigen of the prostate; STRAP-1, prostate; rransmembrane domain; type Illa membrane protein; expression; cencer; prostate cancer; bladder cancer; colon cencer; percette cancer; brownian cancer; bunder antigen; immunisation; immune response; estimate cancer; cellular; humoral; anticancer reactine; antibody; detection; diagnosis; prognosis; monitoring; susceptibility; therapeutic inhibitor; drug cargetting; recombiant procesin.
This sequence represents a novel human protein, STRAP-1 (serpentine transmembrane antigen of the proteins (ARSE) the prototype member of the STRAP family of proteins (ARSE)9-YES197) which exhibit a high degree of structural commercation, but which no significant structural homology to known human proteins. The STRA no significant structural homology to known human proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Нопо

STRAP-1 is thought to be a circle life membrane protein and is expressed predeminantly in prostate crile in normal human tissues. Structurally, STRAP-1 is a 339 amno arid protein characterised by six transmembrane domains and criemnin, suggesting that it folds in a first protein characterised by six transmembrane domains and criemnin, suggesting that it folds in a first protein characterised by six transmembrane and two intracellular N- and C-termin, suggesting that it folds in a first protein is a first protein control of the strap protein is a first protein control of the strap protein is a first protein control of the strap protein is a first protein control of the strap protein is not known. They may be ion channels (from the presence of six transmembrane domains, a feature which is shared by certain ion channels) or companies and the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap of the strap o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated prostate-specific polynuclectics, polypaptides, inside the polypaptides, and bodies also specific polypaptides, and bodies also specific polypaptides (in antigenic polypaptides) and bodies are repeated by the polypaptides. The antibodies are concerted in a certification of the prostate concerted by poppides polypaptides and concerted polypaptides and polypaptides are concerted by poppides and polypaptide are polypaptide and polypaptide are specific for a timeour protein, and for inhabiting shifted polypaptide are useful for stimulating the manner polypaptide are useful for stimulating an immune response, and for treating cancer. The oligonucleotide is useful for detecting cancer. The present sequence is a prostate specific polypaptide of the invention.

The polymucleorides and polypeptides are useful in gene therapy, vaccines or peride therapy. The polypeptides are useful in gene therapy activities, e.g., stem cell growth factor activity, haematopolasis regulating thind activity, insue growth factor activity, immunomobilatory activity and activity, insue growth factor activity. Immunomobilatory activity and activity, insue growth factor activity, immunomobilatory activity and activity, insue growth factor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy -
                                                New polynucleotide encoding a prostate-specific protein, diagnosing, monitoring and treating prostate cancer in a for use in vaccines -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes polynucleotide sequences (I) which encode prostate-specific proteins (II). (II) and (II) have cytostatic activity, and can be used in vaccine production and cane reserve. 'I' ''''
   The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method
                                                                                                                Detecting a prostate cancer-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening modulators of PC, by determining if prostate cancer-associated genes are expressed in a prostate tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

The prostate cancer-associated polynuclectide sequences are differentially expressed in prostate typolynuclectide sequences constant are derived from the tissues of in prostate cancer and are derived from the tissues of various or prostate cancer and are derived from the tissues of various or crganisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for disgnosing and treating prostate cancer associated genes are useful for disgnosing or treating prostate cancer, as well as for useful for disgnosing or treating prostate cancer associated genes are useful for disgnosing or treating prostate cancer associated genes are useful for disgnosing as vaccine or in antisense applications.

20 in gene therapy, as a vaccine or in antisense applications.

21 ABG61800-ABG61944 represent prostate cancer-associated proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                            The present invention provides prostate-specific coding sequences and their encoded proteins. These can be used in the diagnosis and treatment of cencers, particularly prostate cancer. The present sequence is a protein described in the invention.

```

The present sequence is human six transmembrane epithelial antigen of the prostate (STEAP)-1 protein of clone 10. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP-1 gene is located on chromosome 7p2.2 and at used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian and pancreattle) expressing STEAP or inhibiting growth or killing cells expressing STEAP in a patient, comprises administering a veccine composition to the patient. Treating a patient with a cancer that expresses STEAP, or inhibiting growth or killing cells expressed administering to the patient is vector encoding single chain nonoclonal antibody that comprises the vector delivers the patient a vector encoding single chain in concording to the manoclonal antibody that specifically shinds to STEAP, such that the vector delivers the single chain monoclonal antibody coding equence to the cancer cells and the encoded single Chain monoclonal antibody coding that the spressed intracellularly.

Note: The present sequence is also shown in sequence listing of the specification, but it lacks amino acid residues at its N-terminal end.

Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy -

Claim 20; Page 350; 6221pp; English

The invention relates to polynucleotides (AAX51456-AAX53435) and the encoded polypeptides (AAX9333-AAX80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hasmatopoissis regulating activity, these growth factor activity, immunomodulatory activity and activity indictions of the control (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 inflammation. treatment of cancer, leukaemia, nervous system disorders, arthritis and

The p-HYDE gene is associated with the regression of tumour growth in vivo, the induction to susceptibility to approval to the present of the prevention of susceptibility to open the prevention of approximation of approximation of the present of UV damage and the failure to repair DN. The present sequence may be used to reat concer, preferably melanoma, lymphoma, leukaemia, prostate,

                                                                                                                                                                                                                                                                                                                                                 member of the STRAP Early of proteins (ANSES) - VESSON which show members of the STRAP is not been considered as the structural conservation, but which show consistent a high degree of structural conservation, but which show consistent and the structural conservation, but which show consistent and the structural conservation, but which show consistent and the structural conservation, but which show consistent and the structural conservation is thought to be a cype illa membrane protein and is expressed predominantly in proteate cells in normal human tissues. Structurally, STRAP-1 is a 33 maino call protein characterised by six transmembrane domains and intracellular N and creating the six transmembrane domains and conservation and protein expression is maintained at high levels and throughout all steages of protein expression is maintained at high levels and conservation and protein structurally strain cancer. STRAP-1 mRNA and/or protein is called oversexpressed in certain other cancers, including bladder, colon, cancer the function of the STRAP proteins is not known. They may be ion channels of the strain content of the STRAP proteins is not known. They may be ion channels of the strain content of the STRAP-1 and STRAP-1 and STRAP-2 are cell-nurface tunnor antigens. Immunication with a STRAP protein induces cellular and humoral immune responses against competition induces cellular and humoral immune responses and to generate pectific binding agents, to produce anticancer vaccines and to generate competition of strap protein may be used for detection, prognosis, and monitoring of cancers (or succeptibility to cancer), as therapeutic specific and propostic reagents for identifying STRAP-spressing cells strap strap content protein are expressed mainly consistent and expressed mainly consistent and expressed mainly consistent and expressed mainly consistent on their tissues.
                                                                                                                                                                                                                                                                                       Query Match

```
The present invention relates to human six transmembrane epithelial CC satisfies of the proseste (SYEAP) protesh. SYEAP is a member of cell CC satisfies expentine transmembrane antispens. SYEAP gene is used in gene therapy. Inhibiting the development or progression of a cancer (eg. CC prostate, colon, bladder, lung, overian and pancreatic) expressing SYEAP comprises administering to the state of the patient. Treating comprises administering a vaccine composition to the patient. Treating comprises administering to the patient a vector encoding single chain monoclonal antibody that comprises the craft vector encoding single chain monoclonal antibody that comprises the trait specifically binds to SYEAP, such that the vector delivers the cancer cells and comprises the single chain monoclonal antibody coding sequence to the cancer cells and continuous chain monoclonal antibody is expressed intracellularly. The present sequence to the cancer cells and continuous coding into pEr, which is used in the invention. SYEAP-1 comprises is located on chromosome 7p22.3.
                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     proceins,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             06-NOV-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 27; SEQ ID NO 33052; 639pp + sequence listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver -
